PRODUCT CATALOGUE 2023-2024

Eminent Seeds

EMINENCE BY EMINENT

The Eminent Seeds assortment includes a wide range of varieties suitable for different climate zones and market wishes. All the genetics in this catalogue have been developed by our breeders in The Netherlands, tested in several climate zones with different

greenhouse structures, and eventually commercially cultivated by growers across the world.

Our seed production locations are GSPP certified and meet the highest quality standards. The varieties of Eminent Seeds are developed, produced and marketed with a strong international competitive position and an eye for sustainability.

SWEET CRUNCHINO®

SWEET CRUNCHINO®

A word from our partner
in Canada, United States
& Mexico

Nature Fresh Farms

"When we first discovered the Crunchino Pepper, it stopped us in our tracks. We knew it was something very special; its' unique texture – similar to an apple that almost melts in your mouth – was something we had never experienced in a pepper before. Working with Eminent, we have continued to work collaboratively to enhance these genetics by carefully selecting only the best varieties to bring a unique texture that delivers flavor and an experience the world has not yet seen in a pepper variety. Collaborating and expanding our partnerships with Eminent Seeds continues to be our great pleasure."

*Matt Quiring, Senior Vice President Sales & Marketing
Nature Fresh Farms*

Eminent Seeds

'Nature is full of surprises'. We experienced this when we discovered the first genetics of Sweet Crunchino. This pepper may look like an ordinary sweet pointed pepper, but the taste experience is extraordinary!

When we challenge our customers to taste the Crunchino, we see a sparkle in their eyes. The Crunchino has an outstanding level of crunchiness and due to the distinctive skin, shape, and flavor, the Sweet Crunchino brand will be recognizable for any consumer.

With regard to nutrition, Crunchino has scored a high level of proteins and fibers.

High quality breeding techniques have enabled us to produce the colors; Red, Yellow, Orange, Brown and Caramel. You can recognize the Crunchino by the ribbed skin and sometimes twisted fruit shape. Despite being a thin-walled fruit, Crunchino has an excellent shelf life and is therefore suitable for export. We are proud bringing back an innovative and unique flavor into the market!

Eminent Seeds SCOVILLE SCALE

The heat of a pepper is measured with the Scoville scale. The Scoville scale indicates how hot a pepper is (the number of Scoville Units – SHU). To determine this, the concentration of capsaicin and related substances are measured. Capsäicine is the substance that makes peppers hot, this is mainly in the placental tissue of the fruit and therefore automatically in the seeds.
